

## Agilent Technologies Climate Change Position Statement

As a company focused on inspiring scientific discovery, Agilent recognizes the wide-ranging implications of climate change—affecting water resources, agriculture, biodiversity and public health. Over our 50-year history, including the previous 21 years as an independent company, Agilent has provided environmental solutions, analysis and regulatory expertise through our instruments, accessories, consumables and services.

We are at the forefront of addressing this critical global issue by helping customers around the world understand and measure the impact of climate change.

Agilent's own response to climate change is integrated into our emphasis on doing business in a sustainable manner in every community in which we operate. We have [committed to achieving net-zero greenhouse gas emissions](#) no later than 2050 in alignment with the Paris Agreement on climate change.

As an interim target, by 2030, we will reduce absolute Scopes 1 and 2 emissions 50%, and Scope 3 emissions by at least 30% (with a stretch goal of 40%) from a base year of 2019. Agilent is committing to the Science Based Targets Initiative's Business Ambition for 1.5°C, which will ensure that the company's goals are aligned with scientific consensus on progress needed to meet the Paris Agreement and in support of the UN's Race to Zero Campaign.

In addition to achieving net-zero greenhouse gas emissions, we also remain focused on reducing the amount of waste we produce and water we use. For more details, see Agilent's [Environmental Health and Safety Policy](#) and our latest [Corporate Citizenship Report](#) at Agilent.com
